Capital Markets Update

Market Commentary

Treasury yields ended the week lower, but intraweek movement was volatile as markets digested new geopolitical headlines each day. Municipal yields experienced a significant decline following the announcement of the ceasefire with Iran, with 10-year and 30-year municipal yields falling 13 bps overall. Municipal bond funds experienced their second straight week of inflows, adding \$866 million in the most recent week. Notably, funds have now seen inflows in 19 of the last 20 weeks. On the macroeconomic data front, headline CPI for March printed in line with market expectations at 0.9% month-over-month, while core CPI came in below forecasts at 0.2% month-over-month. The March headline inflation increase was largely driven by a spike in energy prices stemming from the Middle East conflict. While core inflation remained subdued in March, market participants will be watching closely to see whether the energy shock bleeds more meaningfully into core prices in April, potentially influencing Fed action.

Fixed Income Analytics Group

In-depth market analysis

Piper Sandler has a nationally recognized fixed income analytics team that provides comprehensive research into market trends and outlook.

[Q2 2026 U.S. Economic and Rate Outlook: Oil Shock or Growth Risk](#)

“Oil has shocked markets, but the bigger story is what it does to growth. Headline inflation is set to rise in the near term, intensifying pressure on an economy that was already losing momentum through softer hiring, a fading wealth effect, and a more fragile consumer. With longer-term inflation expectations still well anchored, the more durable risk may be weaker economic growth as elevated oil prices erode real incomes. Higher oil prices are likely to push headline CPI toward 3.5%, while core inflation rises only modestly. Historically, a peak in oil marks the beginning of a move lower in yields and a better entry point for Treasuries. By year-end 2026, the Fed may deliver as much as 100 bp of rate cuts. (As of this writing, the U.S., Iran, and Israel have reached a two-week ceasefire agreement).”

[March Core and Headline Consumer Price Index \(Headline Roared, Core Whispered\)](#)

“Headline CPI accelerated sharply in March, driven overwhelmingly by the Iran-related energy shock. The energy index rose 10.9% on the month, led by a 21.2% jump in gasoline prices, which accounted for nearly three-quarters of the increase in the all-items index. As a result, year-over-year headline CPI rose to its highest rate since April 2024, while the monthly increase was the largest since June 2022. By contrast, core CPI remained far more contained. Prices rose in airline fares, apparel, household furnishings and operations, education, and new vehicles, while medical care, personal care, and used cars and trucks declined. Beneath the surface, and excluding energy, the broader inflation trend remained relatively benign. Food prices, which tend to be volatile, moved modestly lower on an annualized basis, while core goods, and core services ex shelter posted only small increases. Primary rent and owners’ equivalent rent edged slightly higher, but we still expect shelter to remain part of the disinflation story going forward, albeit at a slower pace. With shelter inflation now close to pre-pandemic growth rates, the scope for a further meaningful decline looks more limited. The main message from the report is that March’s inflation surge was largely an energy story. While core inflation remained subdued in March, the key question is whether the energy shock begins to bleed more meaningfully into core prices in April. For now, that risk remains worth watching, but real-time inflation measures such as the Cleveland Fed Nowcasting model continue to point to softer underlying core inflation next month.”

Rate Movements Last 12 Months
